

German Federal Republic Strategy on Wireless Broadband - February 2009

‘Kräfte bündeln für Deutschlands Zukunft:

‘Wege zu einem schnellen Internetzugang bis in jedes Haus‘

The APWPT strongly supports the German Federal Republic initiative to provide wireless broadband internet access to rural areas.

The APWPT is very concerned on the planned allocation of wireless broadband internet access in the frequency range 790 till 862 MHz (TV channels 61 till 69).

Background:

PMSE works on a legal basis of the Vfg91/2005 (expires on 31.12.2015) on TV channels 61 till 63 and TV channels 67 till 69.

Our Statement:

The allocation of wireless broadband internet is only possible on TV channels 64 till 66. Only this way it is possible to avoid severe collision. Any other decision creates a massive risk for the PMSE industry.

We expect severe economical, social and cultural damage.

Baiersdorf 19th February 2009
