

Coordination and observation of radio frequencies

Informative update on the focus
Many years of radio frequency monitoring
in content and event production
10th November 2022

Dipl. Ing. Ing. Ing. Matthias Fehr

*Introduction

The APWPT e.V. team, together with many organisations, has participated in event productions over the years, observing and recording, where possible, their frequency use, including wireless microphones, their backlinks (IEM), cameras, audio and video links, effects control and team communication.

Results of this work were/are taken into account in publications, scientific papers, studies and (inter-)national working groups (e.g. CEPT, ETSI, ITU-R).

In the following, we present a lot of new and updated information, with a focus on the UHF TV frequency range.

*Today's focus

- **Frequency data on observed event groups**
 - Productions in the cultural, political and sports environment
- **Trend summary**
 - Coordinated / observed links in the UHF TV range
 - Trend of the existing frequency spectrum for use by wireless production tools
- **Not to be presented today**
 - Other uses outside the UHF TV range
 - Methodology for frequency monitoring/data evaluation

Please send your questions to: matthias.fehr@apwpt.org

102 Productions in brief

Trend of minimum required and available Spectrum for Audio PMSE in 470-694 MHz

Over 17 years, data from more than 100 events were collected and analysed. The trend shows the increasing demand for PMSE radio frequency spectrum with locally reduced available radio frequency resources.

* Further information

This presentation is published below.

Further information, including scan evaluations, is published on this technical WEB page:

PMSE Occupation Recorder - <https://pmocre.info/en>

An SRF tool for frequency coordination can be found here:

FreqCoord - <https://www.freqcoord.com>

In addition, wireless tool manufacturers provide powerful tools for PMSE frequency utilisation.

Close cooperation with the frequency coordinator ensures your success in event production.

* Thank you very much!

The many years of work on frequency monitoring was/is only possible through the intensive support of

- Users, Manufacturers
- Event organisations and frequency coordinators
- Scientific institutions
- Committees/Working Groups/Interest Groups
- Relevant authorities

From my side a very special thank you!

With your valuable support, this work can continue - within the limits of the resources that can be made available together.
